Ans to the question No: 1

Level 0:

Level 1:

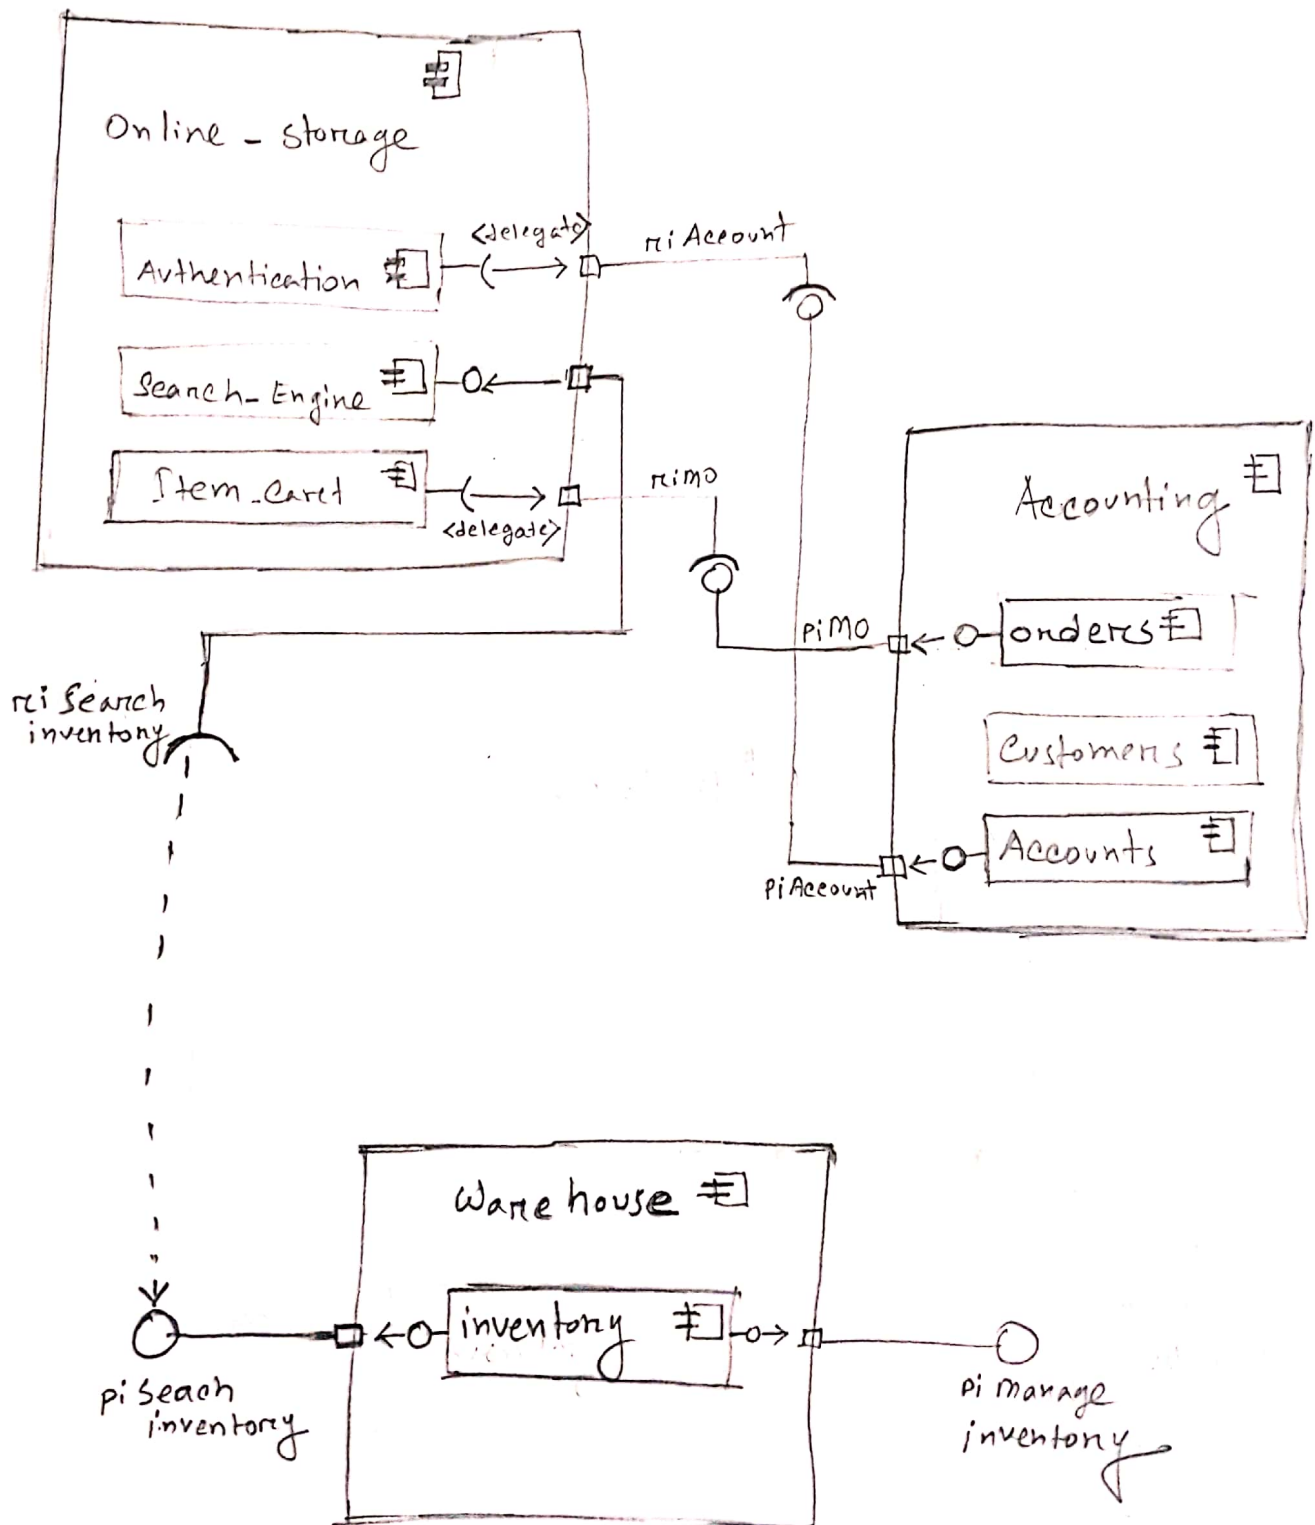

ID: 2019-1-60-085

Name: RAFID MAHMUD HAQUE

(2)

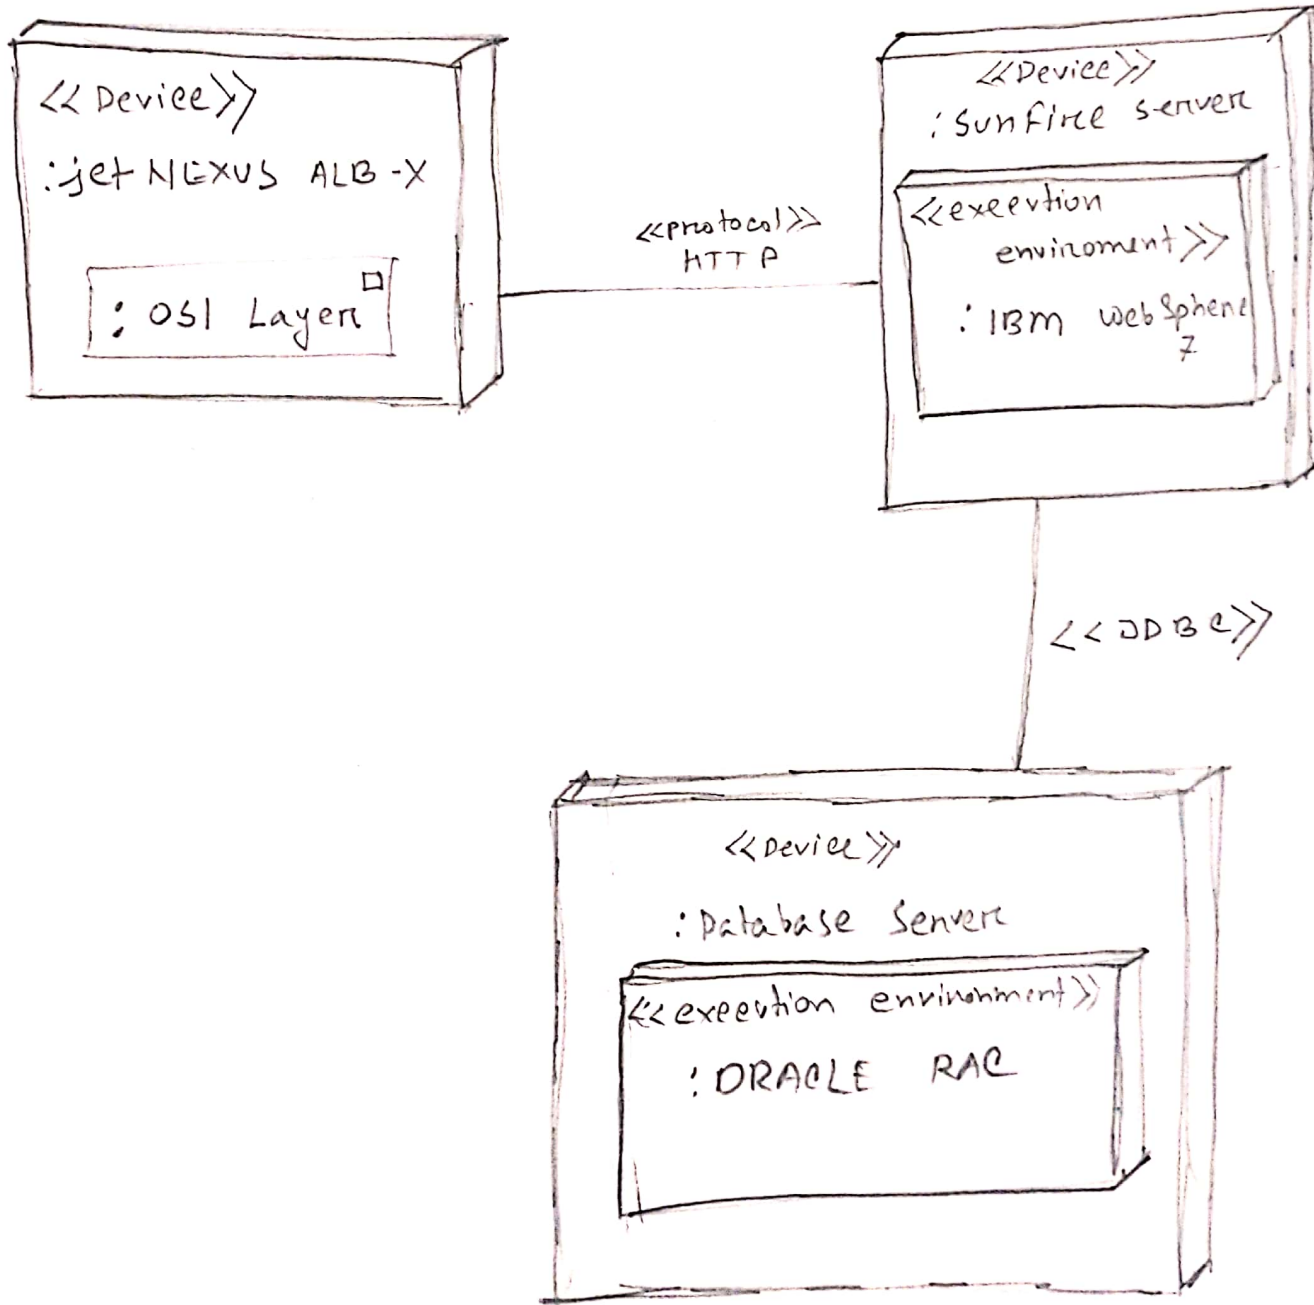

Ans to the question No: 2

ID: 2019-1-60-085
Name: RAFID MAHMUD HAQUE

(3)

Ans to the question NO: 3

Ans to the question NO: 4

- (a) The given scenario represents the "Reduce the user's memory load" golden rule.

This principle helps users to redefine the original values as per his wish. Example: users can sort or range the data in the webpage, these features are pre-selected options.

- (b) The given scenario represents the "Place the user in control" golden rule.

In this rule, there is a principle, direct interaction on screen. This means, users should be given the direct control to use the system at one place. The system should be as simple as possible for the users to use.

(c) The given scenario represents the "Make the interaction consistent" golden rule.

In this rule, there is a principle that, we should not change the model, if past interactive model has created user expectation. This means, if the model has been used by the users for a long time, then we should use the same standard for similar models. This will help users to use the model without any confusion.
